**Aesthetic functionality for hospitality properties**

**"What makes the products minimalist is the effect they have on their surroundings and the space they create"**

Christian Runius  
Founder and Head of Design

**S P A Z A**

Spaza is a designer and producer of bathroom accessories and installations niche for hotel properties with a high awareness of sustainability, aesthetics and guest focus. Our customers are hotel suppliers and distributors within the hospitality sector. The motive of our work is to adapt and reinvent the hospitality property concept to become more sustainable and friendly for everyone involved. Spaza was founded by the Swedish designer Christian Runius in 2013, who realized there is a need for aesthetic, functional and sustainable bathroom accessories made for hotels.

## PHILOSOPHY

Scandinavian minimalism entails only working with those processes and elements that are truly necessary. The way in which every single one of our products are designed serves a specific purpose and does not try to capture the observer's attention. Every Spaza product is made from one raw material and crafted into a single-component item exclusively manufactured in Sweden in line with Swedish design and industry traditions.

## INNOVATION

Central to the design philosophy of SPAZA is ease of use, and we argue that the best of design goes unnoticed in how its function discreetly merges with everyday life — how the experience of use is enhanced by not having you hindered when you do something the way you like it. In other words, a design is successful to us if it is so simple that your flow remains uninterrupted, and, fortunately for us, beauty can be found in this simplicity. It is this core concept that fundamentally defines our SPAZA products.

# **Bottle holder solutions**

Snap-in, lockable and tamper proof

## Bottle holder solutions

Spaza bottle holders are available in various minimalistic models with different options for installation, safety and functionality. All our bottle holders models are available to be customized to your specific dispenser bottle and pump.

 [Discover all bottle holder models here](#)

***Snap-in*** feature for quick access  
when replacing the bottle

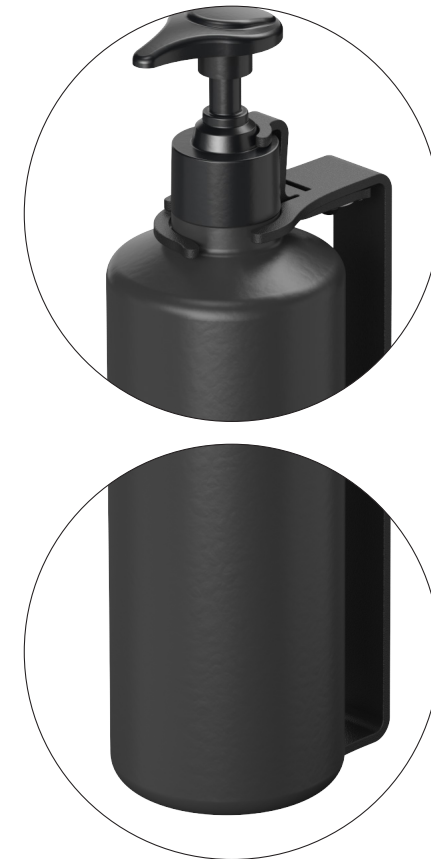

***Base ring*** feature keeps the bottle fix in  
place and increases the level of safety

***Lockable*** feature keeps the bottle  
locked without signaling distrust

***Tamper proof*** feature prevents  
unscrewing the pump

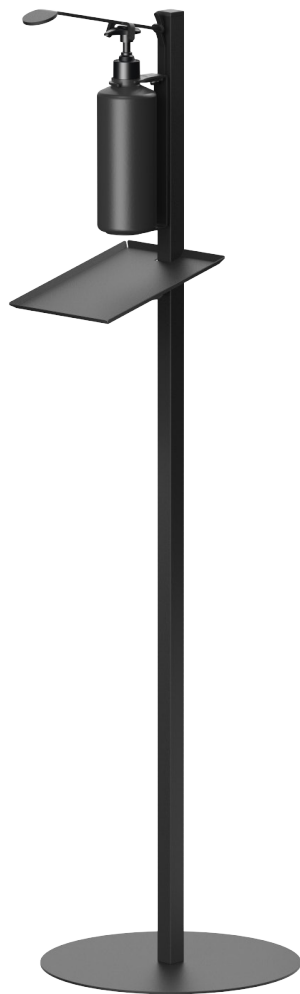

***Clean base*** gives full focus to the bottle

## MECHANICAL ENDURANCE TESTING

Testing our product's mechanical durability is essential to get insights in our product's potential weaknesses and to ensure ideal performance. When we decided for how many repetitions, or cycles, that our tests should run in our starting point was at least one action per day 365 days a year in 10 years. That results in 3,650 cycles so we decided to run for minimum 5,000 cycles.
